EDUCATION

University of Washington

Bothell, WA

Bachelor of Science in Computer Science & Software Engineering (GPA: 3.6)

August 2023

- **Relevant Coursework:** Software Engineering, Data Structures & Algorithms, Computer Architecture, Operating Systems, Database Systems, Web Development, Network Architecture, Computer Vision, Calculus, Statistics

TECHNICAL SKILLS

Languages: Java, Python, C/C++, C#, PostgreSQL, SQL Server, JavaScript, HTML/CSS, ARM Assembly

Libraries & Frameworks: React, Django, Spring Boot, .NET, OpenCV, JUnit, libpq, Docker, Kubernetes, Bootstrap

Tools & Technologies: Git, Linux, REST API, Azure, microservices, Maven, Jupyter Notebook, CI/CD, Agile, Windows

EXPERIENCE

Bioinformatics Research Assistant

March 2023 - August 2023

University of Washington

Bothell, WA

- Built a web platform connecting data providers and ML engineers with Django backend and HTML/CSS/JS frontend
- Guided a team of 4 developers in selecting a monolithic architecture with MVT pattern during design phase of SDLC
- Created a REST API with Zoom API and Django Rest Framework, simplifying Zoom meeting management
- Accomplished user authentication through the OAuth 2.0 protocol to avoid password sharing for 3rd party services
- Documented full-stack app using a standard template, increasing developer productivity by 20% with clearer code

Undergraduate Teacher Assistant

March 2023 - July 2023

University of Washington

Bothell, WA

- Enhanced comprehension of OOP principles in 80% of students by illustrating real-world applications
- Provided troubleshooting assistance to 30-40 students, aiding in identifying and resolving issues in C++ projects
- Communicated with a professor to ensure fair grading for 40 students' programming projects and exams

PROJECTS

Fitness App | Java, Spring Boot, React, Hibernate, Azure, Git

July 2023 - Present

- Directed microservices architecture development on Azure PaaS, boosting fitness app scalability and maintainability
- Leveraged Spring Boot and Hibernate to boost data processing efficiency
- Collaborated with a UI/UX designer to create wireframes and kick-started React-based frontend development

Airport Management System | PostgreSQL, C++, libpq, Git, OOP

February 2023

- Integrated C++ application with PostgreSQL database through libpq API
- Improved query response by 30% with a normalized schema based on 1NF, 2NF, and 3NF guidelines
- Improved flight information management by developing 20+ CRUD operations, employing prepared statements
- Designed a user-friendly console UI for employees to facilitate flight creation and management interactions

Road Sign Detector | C++, OpenCV, Windows, Git

November 2022

- Led a team of 3 in developing a road sign detection program in C++ and OpenCV without model training
- Utilized image thresholding and HSV color analysis techniques to achieve precise recognition of American road signs

SmartNotes | Python, Django, HTML, Bootstrap

October 2022

- Developed a Python web app utilized by over 10 classmates to streamline note management for coursework
- Optimized user interface with Bootstrap, leading to a 50% increase in user engagement and usage

Precision Closest Pair Finder in 2D Space | Java, Git, OOP

December 2021

- Implemented an efficient $O(n \log n)$ Divide and Conquer algorithm for finding closest pairs of points in a 2D plane
- Handled a large dataset of at least 10,000 points with precision, outputting distances with four-digit accuracy
